## Our Place in Space Live

Measurement Information

These are the measurements for your Solar System Bunting....
Remember the scale in this activity is:
$10 \mathrm{cms}=1$ Astronomical Unit (AU) and equates to 93 million miles or 150 kilometres.

| Sun | 0.0 AU | Place planet at | 0 cm |
| :--- | :--- | :--- | :--- |
| Mercury | 0.4 AU | Place planet at | 0.4 cm |
| Venus | 0.7 AU | Place planet at | 0.7 cm |
| Earth | 1.0 AU | Place planet at | 10 cm |
| Mars | 1.5 AU | Place planet at | 15 cm |
| Asteroid Belt | 2.8 AU | Place planet at | 28 cm |
| Jupiter | 5.2 AU | Place planet at | 52 cm |
| Saturn | 9.6 AU | Place planet at | 96 cm |
| Uranus | 19.2 AU | Place planet at | 192 cm |
| Neptune | 30 AU | Place planet at | 300 cm |
| Pluto | 39.5 AU (average) | Place planet at | 395 cm |

An extension to this activity could be for children/students to calculate in miles how far each planet is from the Sun itself...
e.g. Jupiter would be $93 \times 5.2 \mathrm{AU}$ ( $1 \mathrm{AU}=93$ million miles $)=483.6$ million miles from the Sun
